Subject: Re: Invenergy - Allegheny Energy Center Application

Shaun did the work on that one, and there are a bunch of files on our network, not sure which are draft/final. I'll let him follow up (but I can do some digging around in the directories as well, if needed). I just heard last night that this was in public comment.

From your email a few weeks ago, I'd never seen that Clairton report. Some useful stuff in there. I guess they started that report last year.

No big modeling efforts here currently. CMU should be wrapping up their work by the end of May. Mr. Paine is still working on coke oven buoyancy. And I've now been deposed for ongoing lawsuits.

Next big SIP revision will be PM2.5 redesignation (we're attainment now, and not due to COVID). Not sure if we'll need any modeling, will be talking to R3 Planning.

And if I can ever get to it (seems like a new fire drill pops up every day), I still want to start looking at SCICHEM or CALPUFF again with MMIF data.

Another thing here, we're starting up PAMS at Lawrenceville this summer. We're thinking about where to place the ceilometer. I asked NWS, and then Nolan. I guess you're next in line. We could even have a call at some point. Any thoughts on best location here? Lawrenceville as the PAMS site, Harrison as the peak site, or even sodar as our upper air site? Ceilometer doesn't have to be collocated with the PAMS site. I don't think airports have one.

I'm going to forward an email that I sent to NWS (just so that I don't have to re-type things). Then maybe I'll follow up with our monitoring and cc you and Nolan.

-Jason

My permitting folks let me know that AEC is out for public comment. I'm contacting you to get the final modeling report and any associated modeling files to do my normal review. I've seen bits of this analysis but can't remember exactly what I've seen (too much SO2 stuff going on plus we're having system glitches that prevent me from connection to our drives remotely).

Let me know what you have and what you can get me (and how I can receive it). Thanks in advance.
